Hotel Management System - Working Features

1. Room Booking System: Single and multi-room bookings supported

2. Guest Account Funding: Guests can fund accounts and use balance for bookings and services

3. Flexible Payment System: Supports both funded and pay-on-spot bookings

4. Bar and Restaurant Ordering Module: Categorized by service area and item category

5. Cart Functionality: Add items with quantity tracking and total calculation

6. Receipt Generation: FlowDocument-based receipt export for bookings and transactions

7. Booking Extension Support: Extend bookings with appropriate charge recalculations

8. Room Assignment: Each room in a multi-room booking can have a separate guest name

9. Guest Account Details Viewer: Nested DataGrid for bookings, transactions, consumptions, and payments

10. PostNightCharge Function: Automatically applies room charges each night based on current room rate

11. Service Consumption Posting: Charges (bar, laundry, etc.) can be posted to guest accounts

12. Consumption Reversal: Supports reversing consumptions with validation

13. Laundry Tariff Management: Tariff is stored in DB and used for transactions

14. Room Change Functionality: Room can be changed mid-booking with audit trail and charge continuity
